HEBH 2500

Fast hammer blow rate for rapid pile penetration

Full energy monitoring on screen

Full history of hammer performance

Highly reliable and robust electrical switching

Intelligent stroke control

Very few serviceable parts, with on screen fault diagnostics

Easily maintained by Diesel / Mechanical fitter

Cushion block irons out peak stresses

Very efficient energy transfer

"the continued evolution of digitally controlled piling hammers"

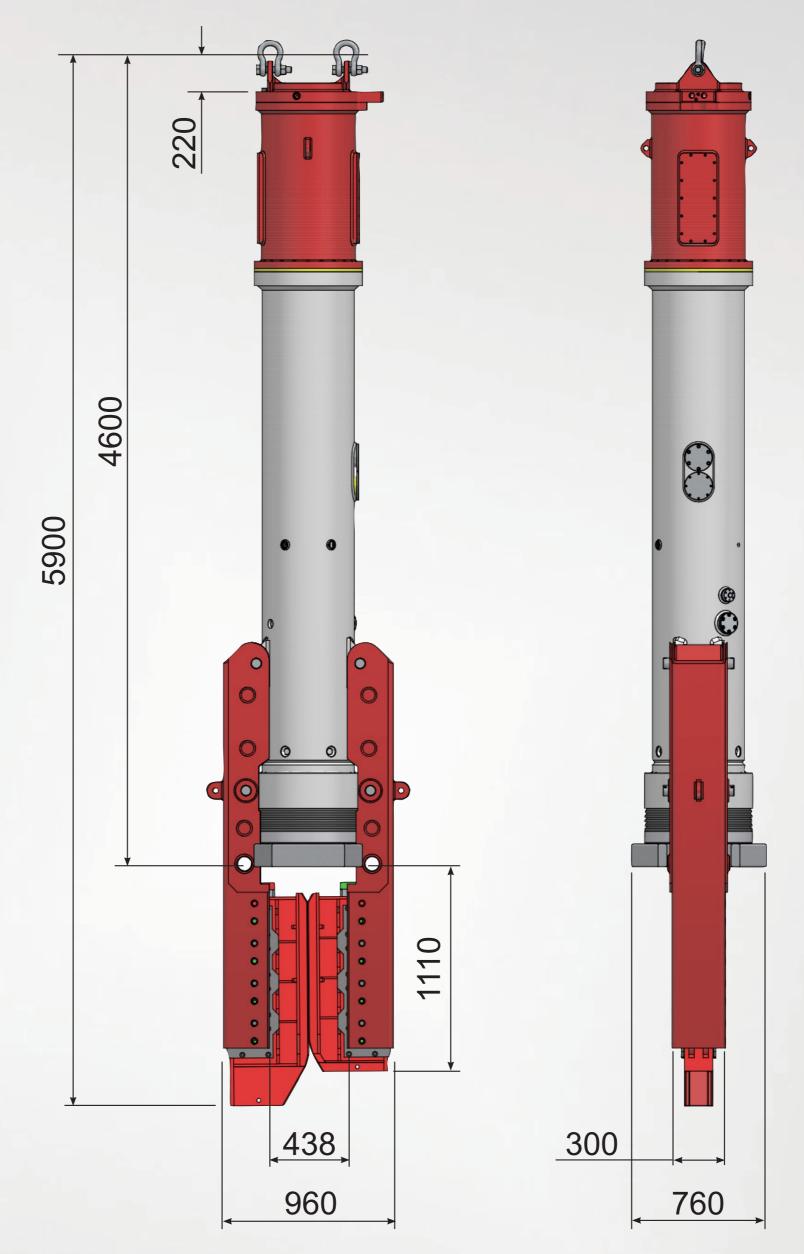

hydraulic impact hammer

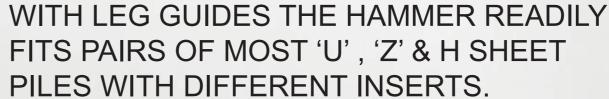

HPH2500 HAMMER

SPECIFICATION	UNITS	HPH2500
RAM WEIGHT	kg	2,040
	lbs	4,488
IMPACT VELOCITY	m/s	4.98
	ft/s	16.30
MAXIMUM ENERGY TRANSFERED TO PILE	kNm	25.00
	ft lb	18,439
MINIMUM ENERGY TRANSFERED TO PILE	kNm	10.0
	ft lb	7,380
BLOW RATE	bpm	80-120
LENGTH - LEAD MOUNTED	mm	4,430
	in	175
MINIMUM WIDTH OF BODY	mm	520
	in	20.5
WEIGHT - WITH SHEET PILE	kg	7,000
LEG GUIDES + SPREADER PLATE	Ibs	15,400

POWERPACK

SPECIFICATION	UNITS	DAWSON
DIESEL	kW	93
ENGINE POWER	rpm	2100
HYDRAULIC	bar	230
SYSTEM PRESSURE	psi	3335
OIL FLOW RATE	L/min	150
SIZE - LENGTH x	m	2.85 x 1.34 x 2.26
WIDTH x HEIGHT	in	112 x 53 x 89
WEIGHT	kg	3000
	lbs	6,600
FUEL CAPACITY	litres	275
FUEL CONSUMPTION @ 60%	litres / hour	15.2

Ø914 GUIDE SLEEVE

83

With constant drop weight position

monitoring, the velocity of the drop weight

is also known, therefore energy output can

to the operator on the powerpack interface

screen. This information can be recorded

direct to a laptop via a Dawson software

interface, and can be saved in standard

productivity record.

spreadsheet formats, giving a blow by blow

account of every pile driven and a day to day

be accurately measured and is displayed

digitally controlled drop weight

Dawson Construction Plant has developed an industry leading, robust and simple, electronic control system that **constantly** monitors the drop weight position. This constant monitoring allows the switching timing on the main hydraulic spool to be trended to continually optimise hammer performance throughout varying piling conditions, such as:

- 1 Hard driving with pile recoiling
- 2 Soft driving with a running pile
- 3 Cold hydraulic oil on start up
- 4 Raking piles

INTERFACE SCREEN MOUNTED ON POWER PACK

MAIN PAGE Energy Stroke 0 × Blows/m Off Pile Blows Reset Blows Lap Main History

TYPICAL SCREEN SHOTS

HISTORY PAGE Power Ups Power Hours Total Blows Total Energy 0 Mgm Main History

The main screen displays bar graphs showing hammer stroke & hydraulic oil temperature.

An Off Pile indicator confirms when the hammer is securely seated on the pile, and allows piling to commence.

There are numerical read outs showing blows per minute, energy per blow and total blows. The lower reading shows blows in LAP cycle. (Measuring blows per increment). The units can be changed from imperial to metric.

The history screen provides information on the total number of start ups / total hours / total blows and total energy through out the life of the hammer.
