## INNOVATIVE PILING EQUIPMENT

HPH1200 Job Example – H-pile/timber retaining wall Disney World, Florida

When a retaining wall, consisting of 12" H-piles driven at intervals with timber inserts was required at Disney World, Florida, Contract Wharton-Smith used the Dawson HPH 1200 double acting Hydraulic Piling Hammer to drive the 'H' piles to level.

The DCP HPH 1200 Hammer was used because of its ability to drive 'H' piles or steel-sheet piles of all sections without the need to change inserts and because of its environmentally friendly performance.

Its high energy transfer efficiency, its slim compact design and low overall weight, all contributors to the true versatility of the hammer.
